

- Increase Traffic
- Add a unique service for your customers and guests
- Differentiate yourself from competitors
- Add Revenue

All Yours...

Unlike systems from providers like T-Mobile™, Linkspot™, Boingo™ and others, users do not have to pre-subscribe to a monthly plan - they can purchase access from you on an impulse. The large providers also keep the majority of the revenue, do not allow you to set prices or give away access and allow users to roam across locations, including to your competitor's locations. Checkbox lets you keep control, keep the revenue, and keep the customers.

- ➔ **You determine what to charge and how long to allow access.**
- ➔ **You keep 100% of the revenue**
- ➔ **No per user licensing fees or host fees**

No Annual Licensing Fees or Maintenance Contracts required.

CheckBox can be used with any persistent internet connection such as cable, DSL, T1 or Satellite.

* T-Mobile , Linkspot & Boingo are trademarks of their respective owners.

<i>Truck Stops</i>	
<i>Visitor Centers</i>	

Complete Systems for only \$599

Includes Server with all Software preinstalled, Wireless Access Point, and cables.

Checkbox Self Contained Hotspot

with Ticket Manager

A simple, inexpensive solution for providing wireless internet access

Your business can provide Internet access and attract customers with this value added service.

How It Works - The CheckBox and Ticket Manager Systems work together to allow you to control who has access to the internet on your premises and for how long.

Using Ticket Manager you print user tickets that contain an access code. You can create different categories of tickets; for example you can offer 30 free minutes of access with the purchase of each meal, and sell 1 hour of access for \$1, or an all month pass for \$10. All parameters of the ticket are up to you; the price, the expiration date and the amount of time allowed online.

Ticket Manager will print sheets of tickets that you distribute to your customers and guests.

Your customers and guests then connect to the network, wirelessly with their own laptops or PDA's, or through wired ports you provide, or at PC's that you provide. Using any web browser the guest will automatically be redirected to a logon page that prompts them for their access code. This logon page can feature your graphic, company logo, branding and any messages you want to express to your customers and guests.

Simple Setup

All CheckBox Systems are preconfigured and ready to go out-of-the-box. Simply unpack, connect to power, plug into your internet connection and you are ready to go!

Ready to go for only \$599!

Includes Hotspot Server and Wireless Access Point and cabling.

For more info or to arrange a demo call Denis at (Kelowna) 250-718-1512
or email sales@bchotspot.com

More people, business people, professionals, students and others, are going wireless every day. Using the widely adopted 802.11 wireless standards, many devices such as laptops and PDA's can connect wirelessly to the internet through wireless HotSpots.

No Annual Licensing Fees or Maintenance Contracts required.

* Optional maintenance and site support contract, and end user guest support contracts are available at very competitive rates.

Have a large area to cover?

No problem. Additional units can be added to wirelessly extend your coverage area. **No additional network wiring required**, just AC power. The additional units will wireless interconnect and automatically build a "wireless mesh", extending your area coverage as far as you need to go. Use the built in mesh status facility to monitor the health of your mesh, and to fine tune each mesh node placement. As simple to use as everything else in Checkbox!

Additional mesh nodes are only \$399!
